

How to Install HedgeModManager on Linux and the Steam Deck

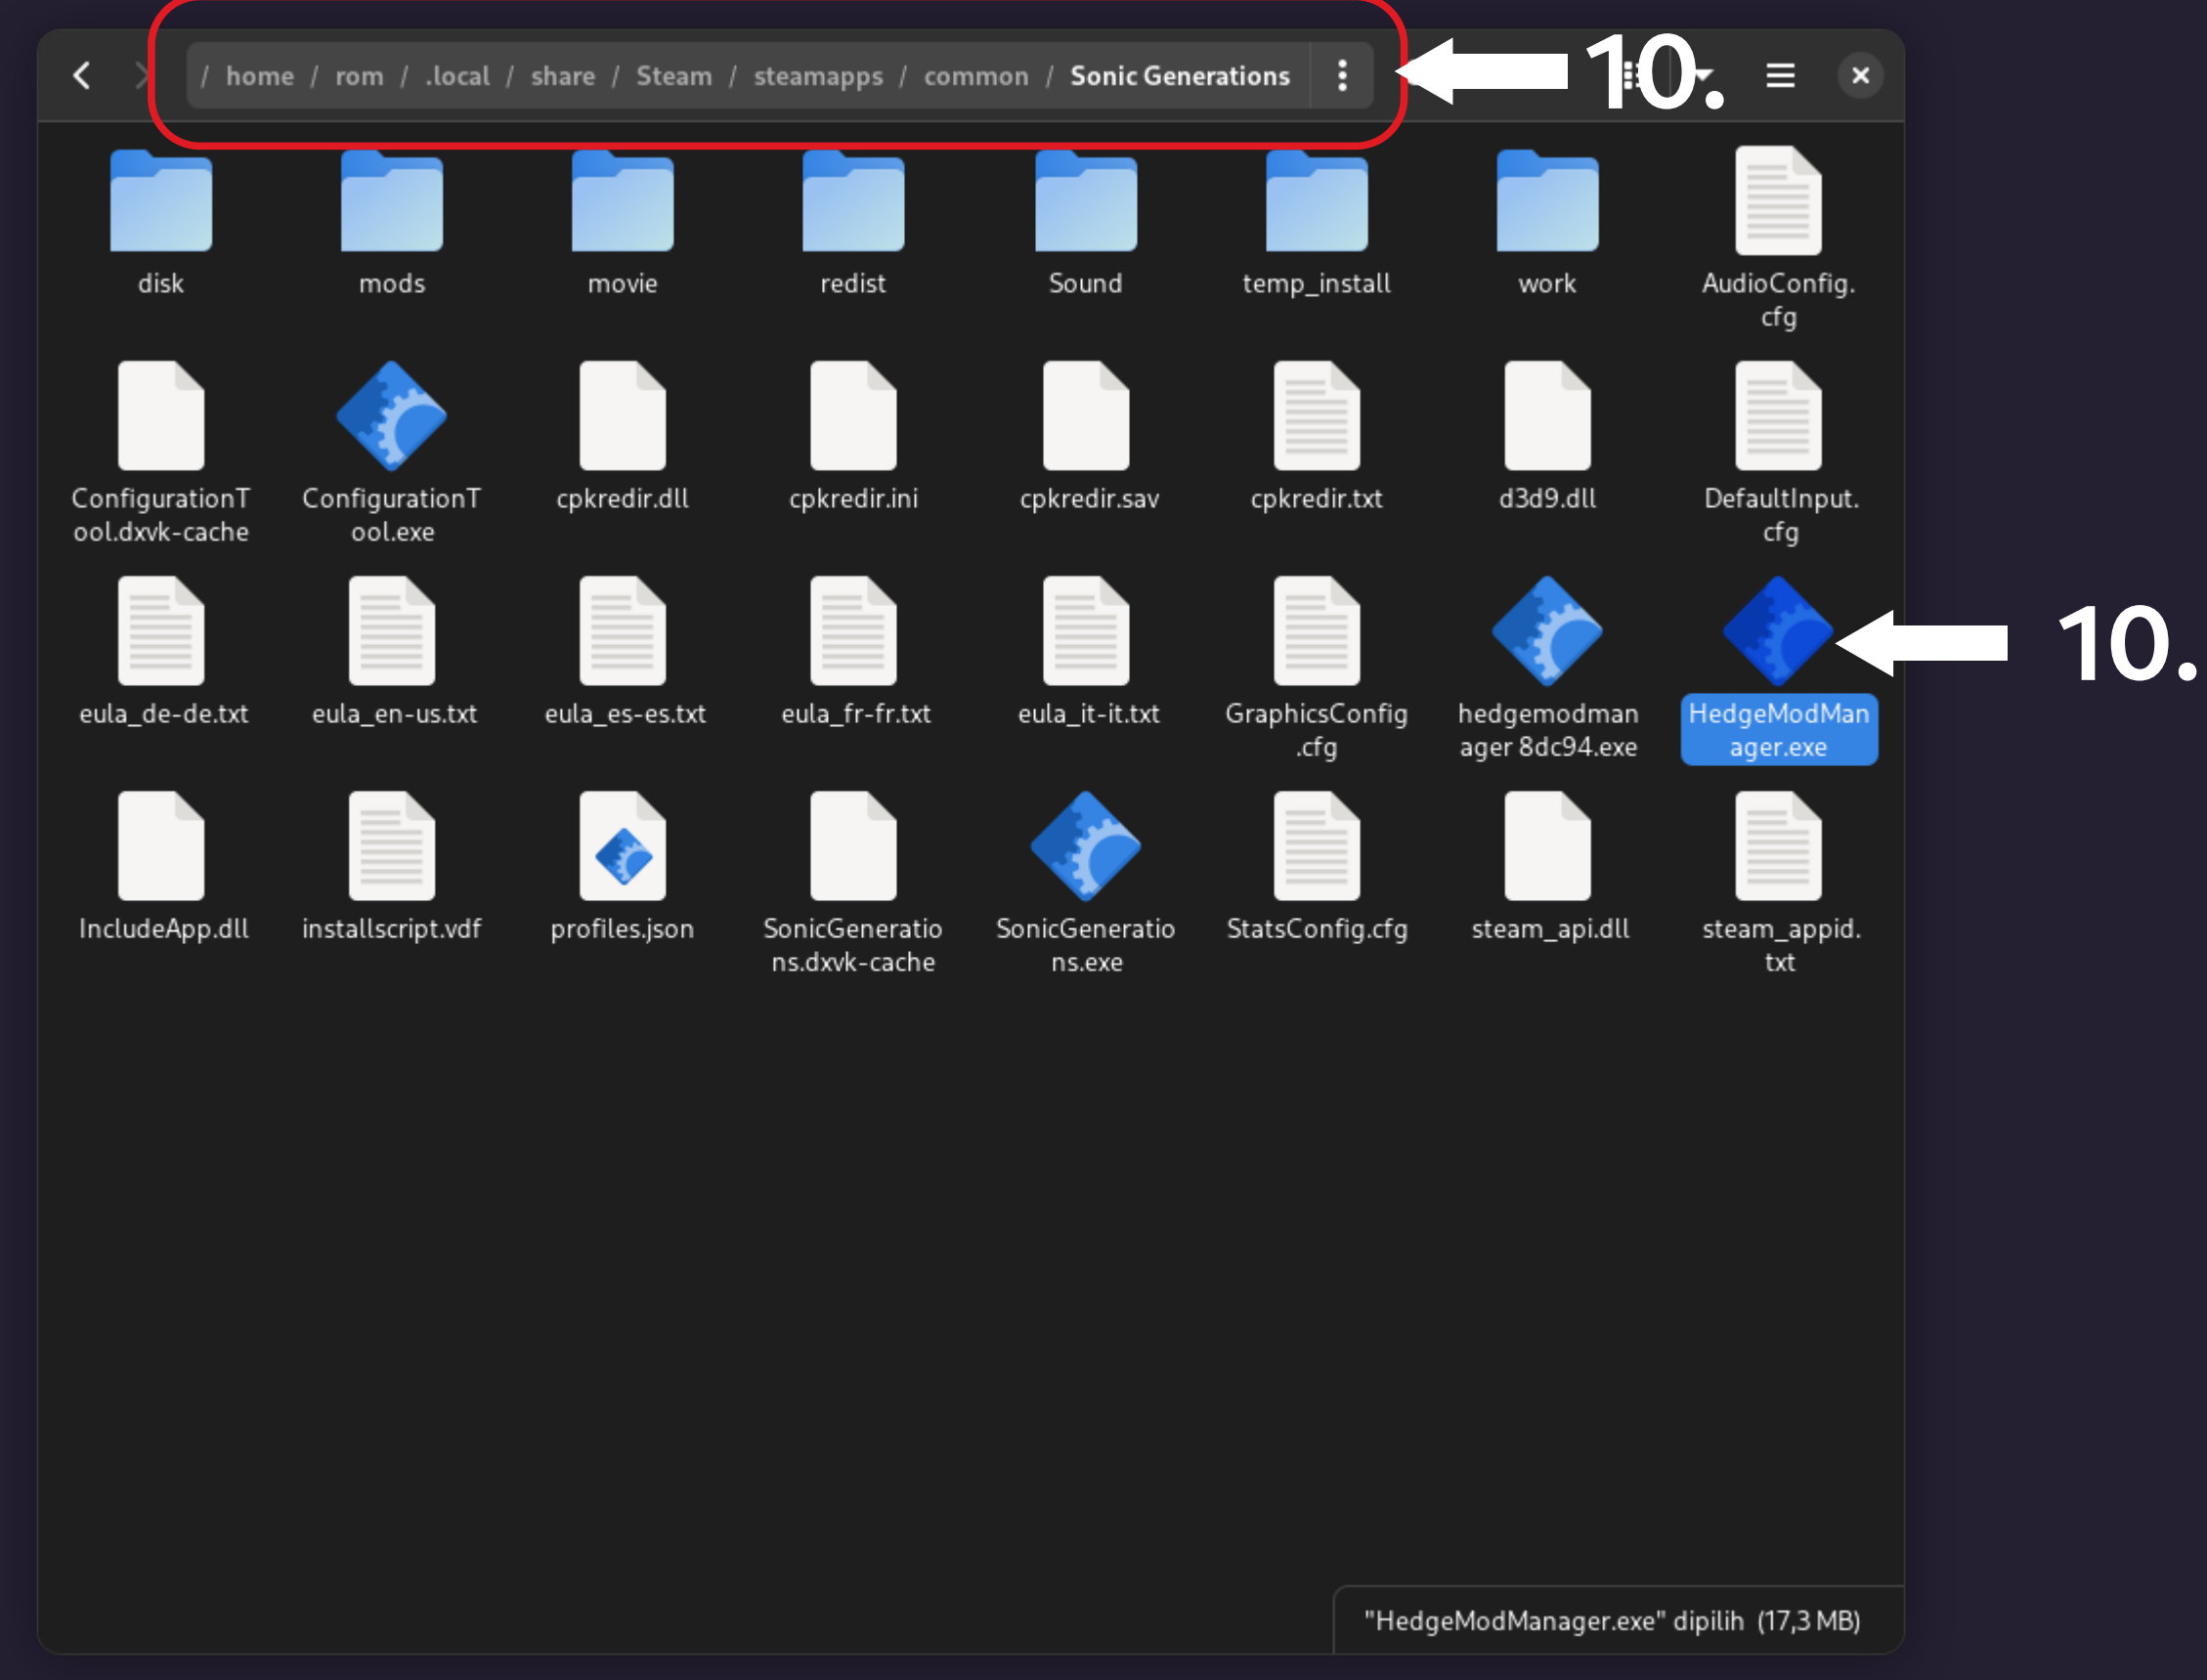

1. Click on the "+" Icon in Bottle's headerbar

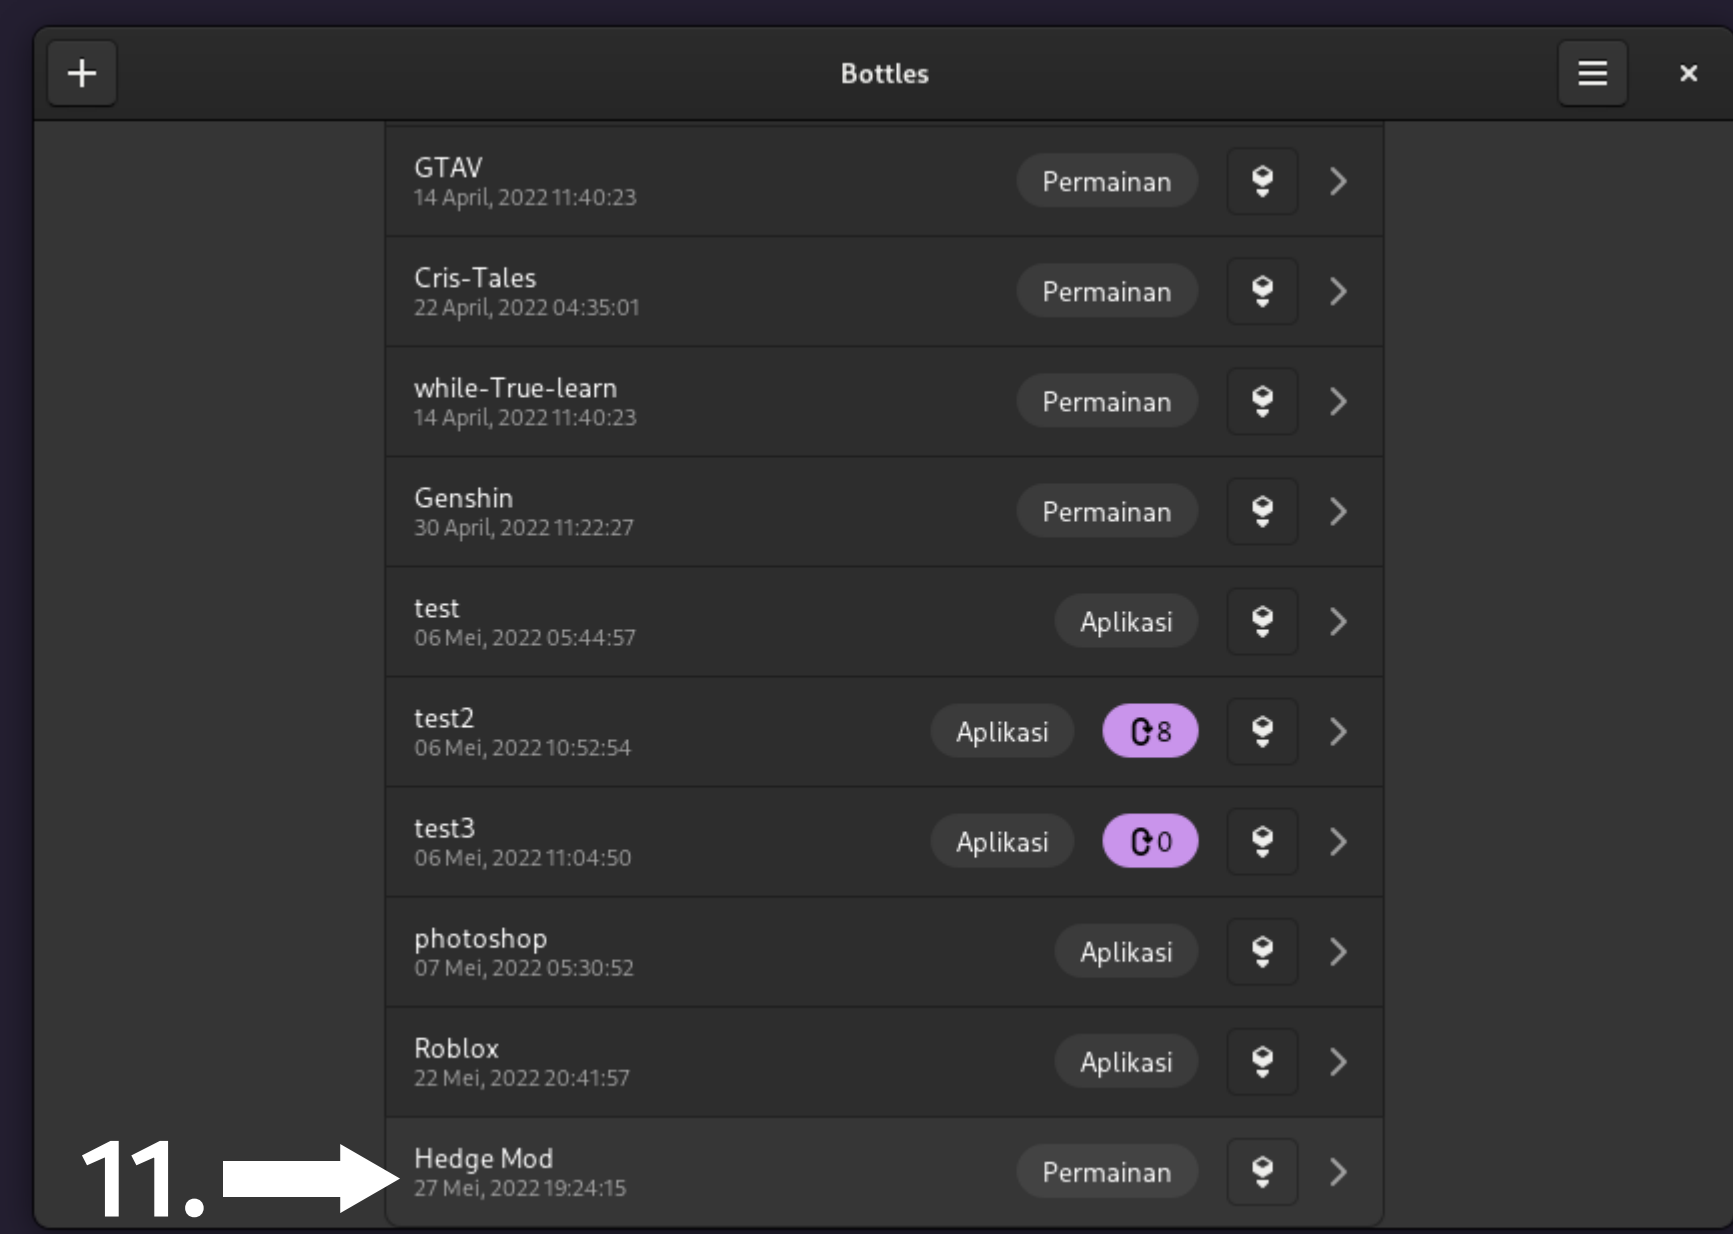

2. Give the bottle a name
3. Choose "Custom" Environment
4. Choose "caffe-7.7"
5. Choose "64-bit"
6. Click on the folder icon in "Use custom recipe"

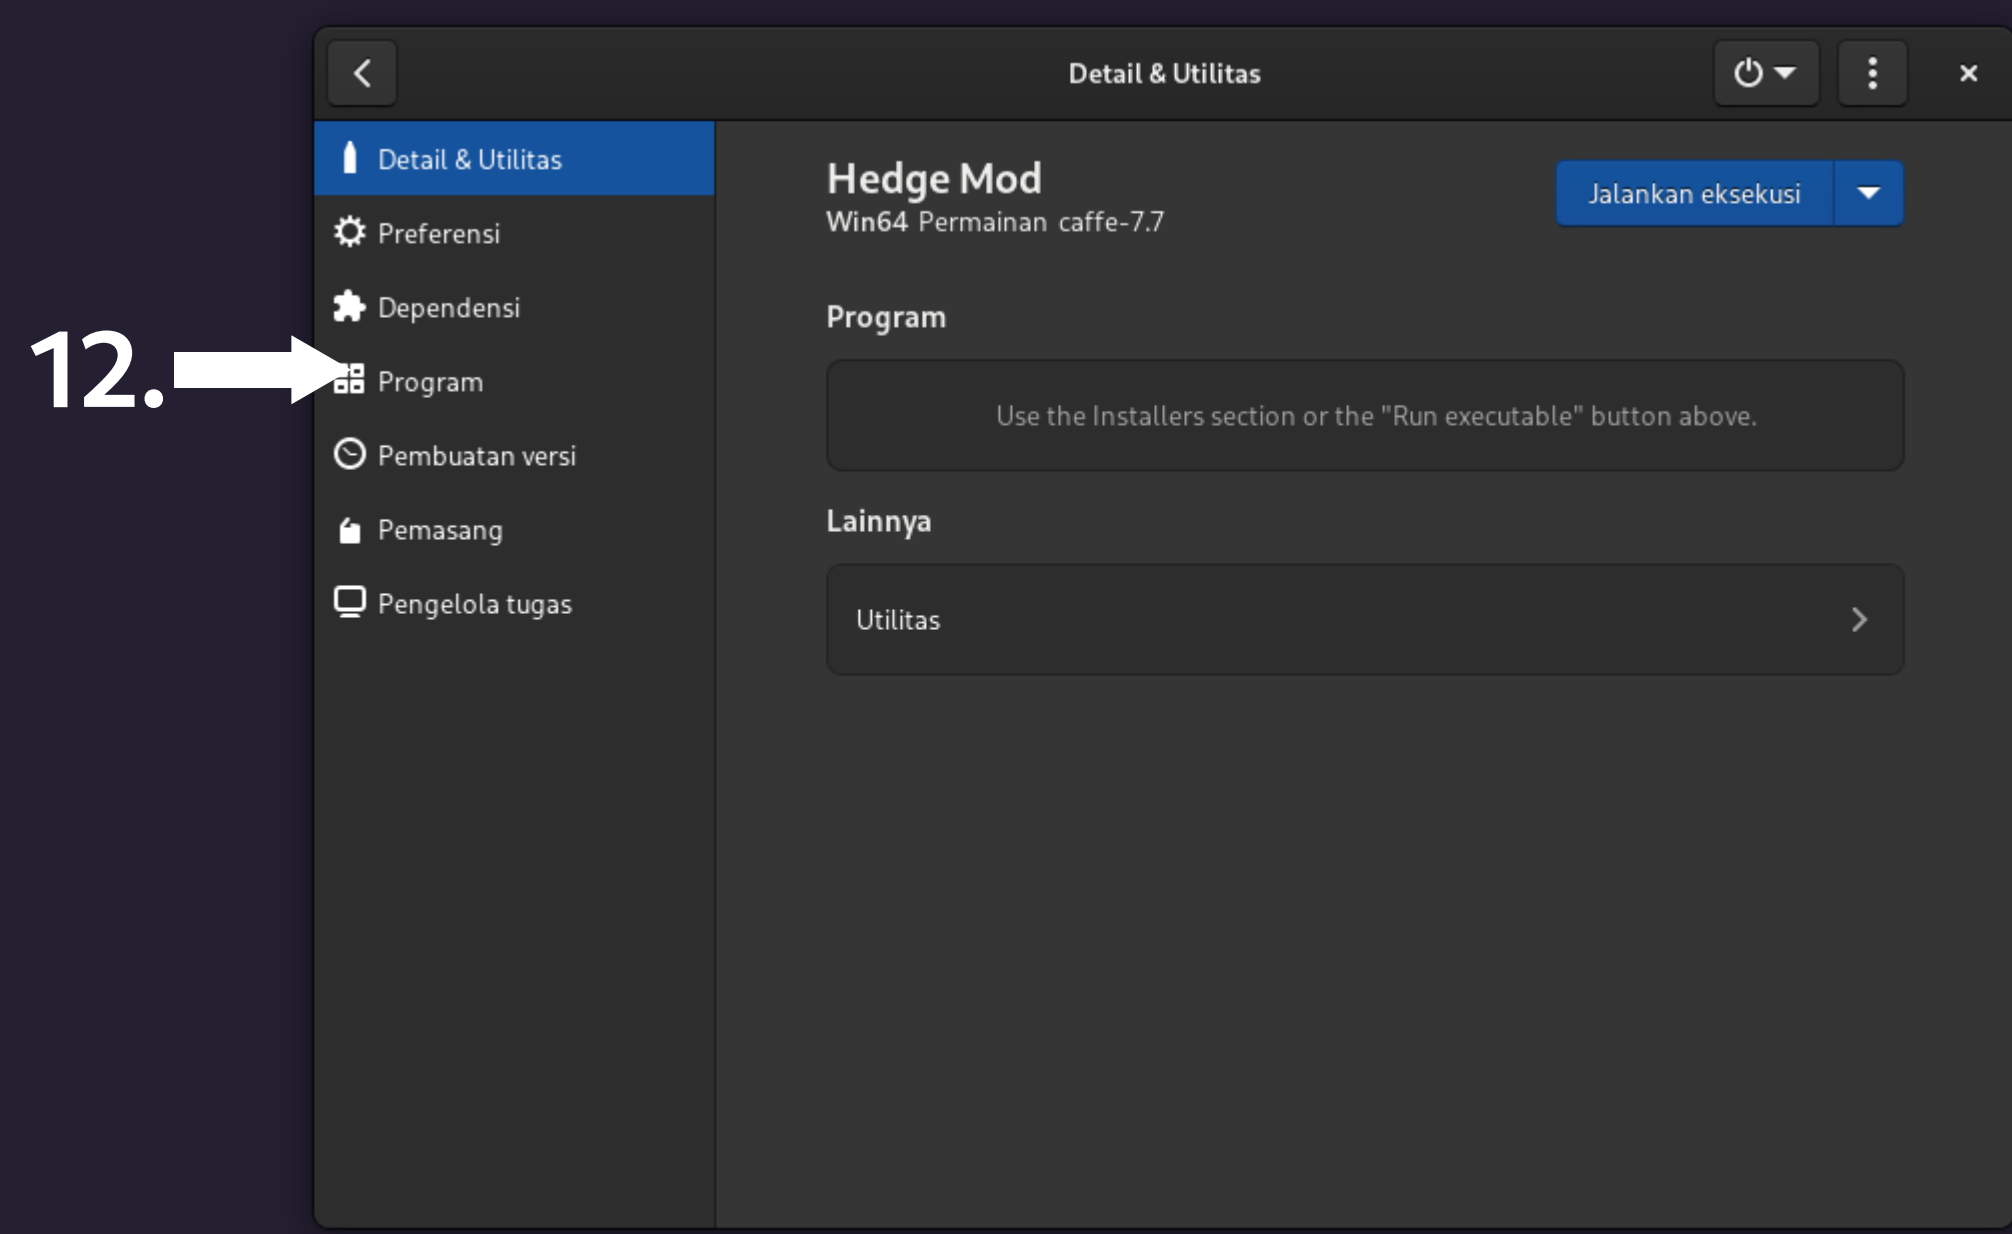

7. Choose the Hedgemodbottle.yml bottle configuration file provided in the link or qr code below
8. Click Choose

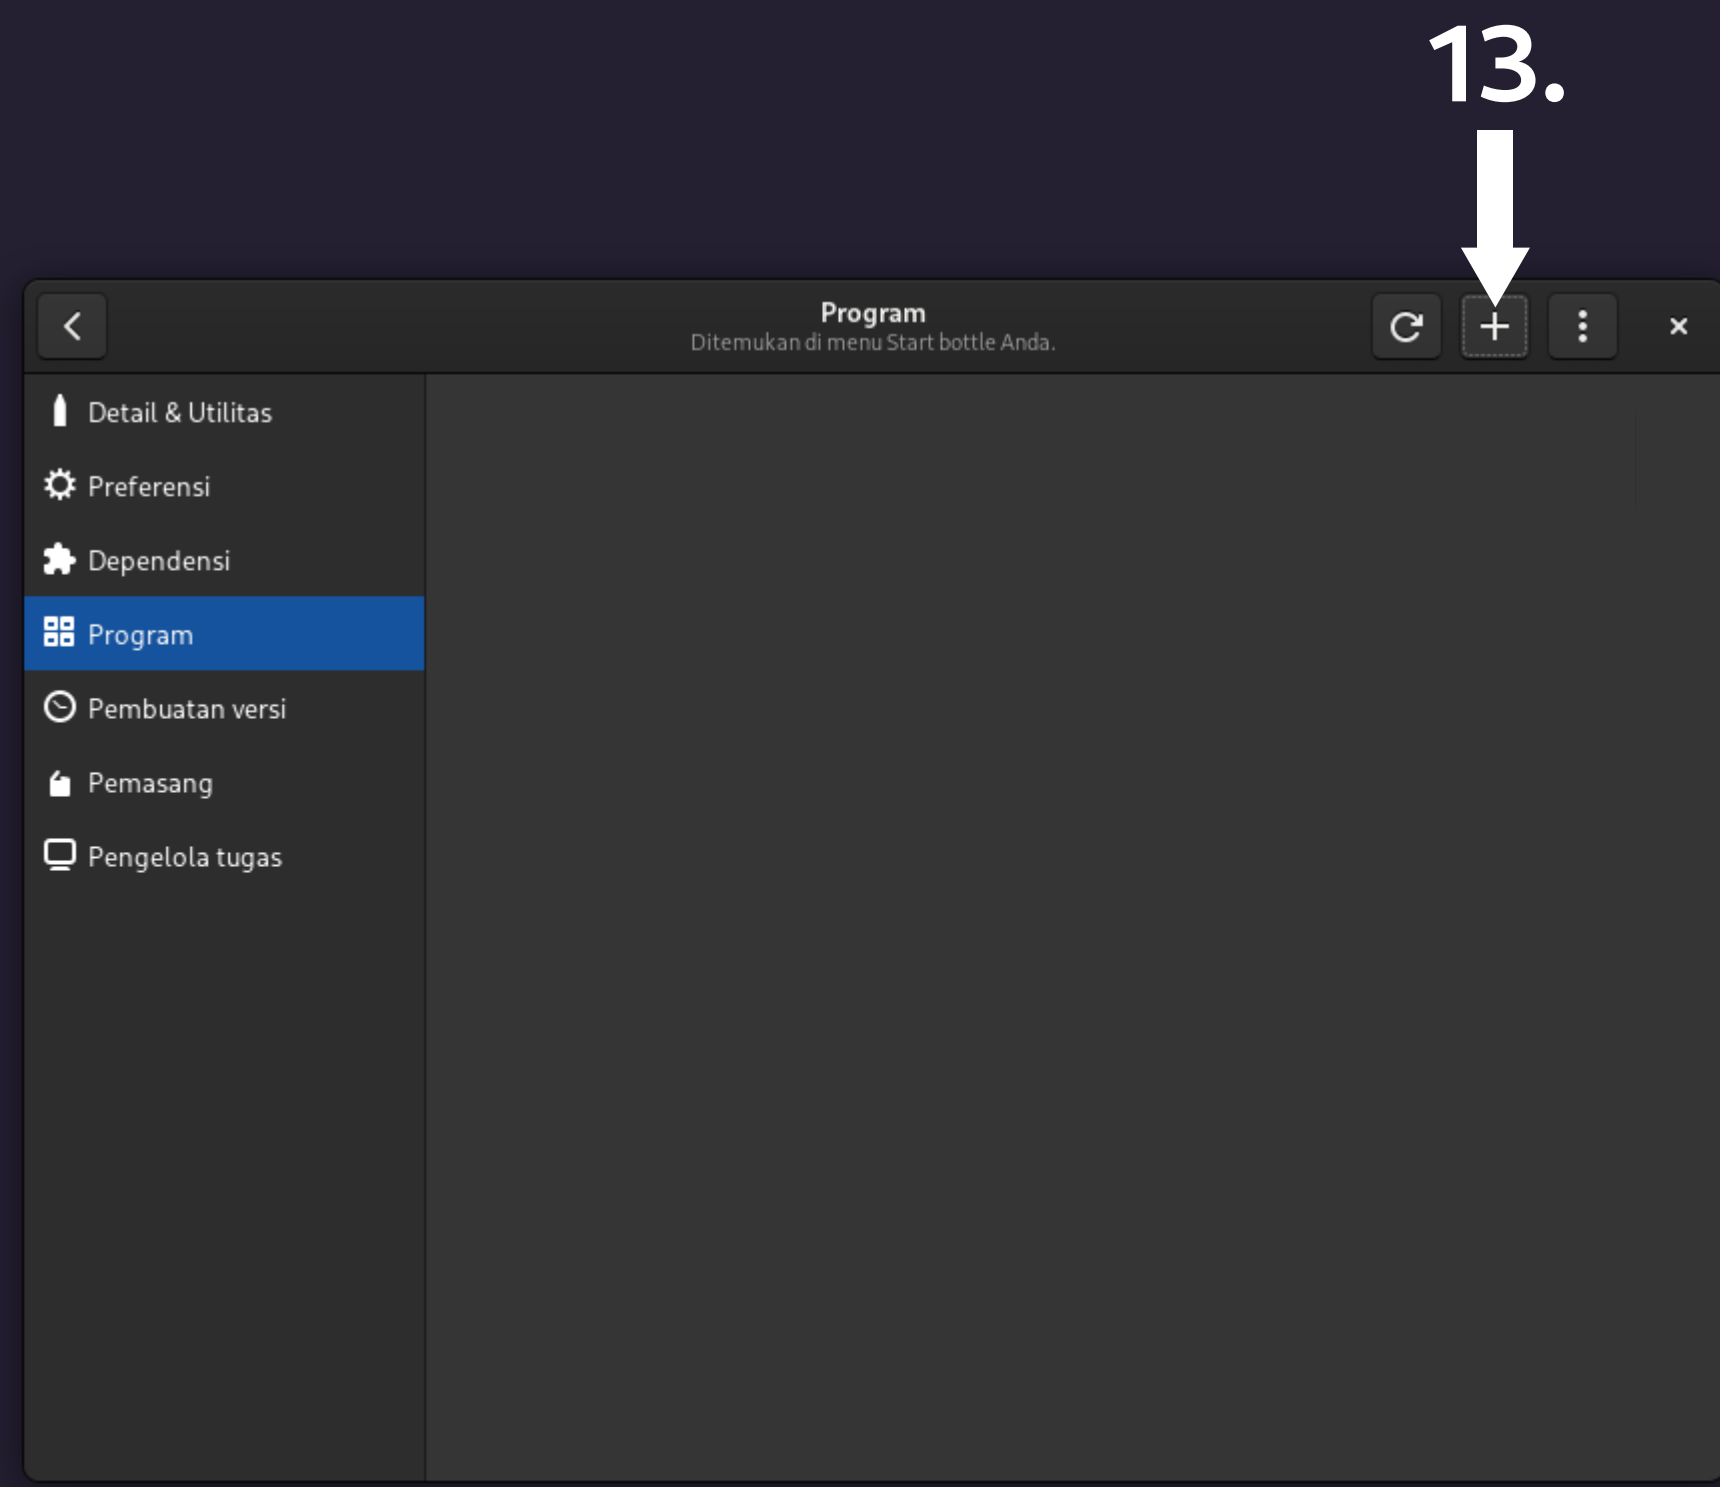

9. Download HedgeModManager.exe in link or qr code provided below
10. Move the HedgeModManager.exe to the folder of your Sonic Generations install

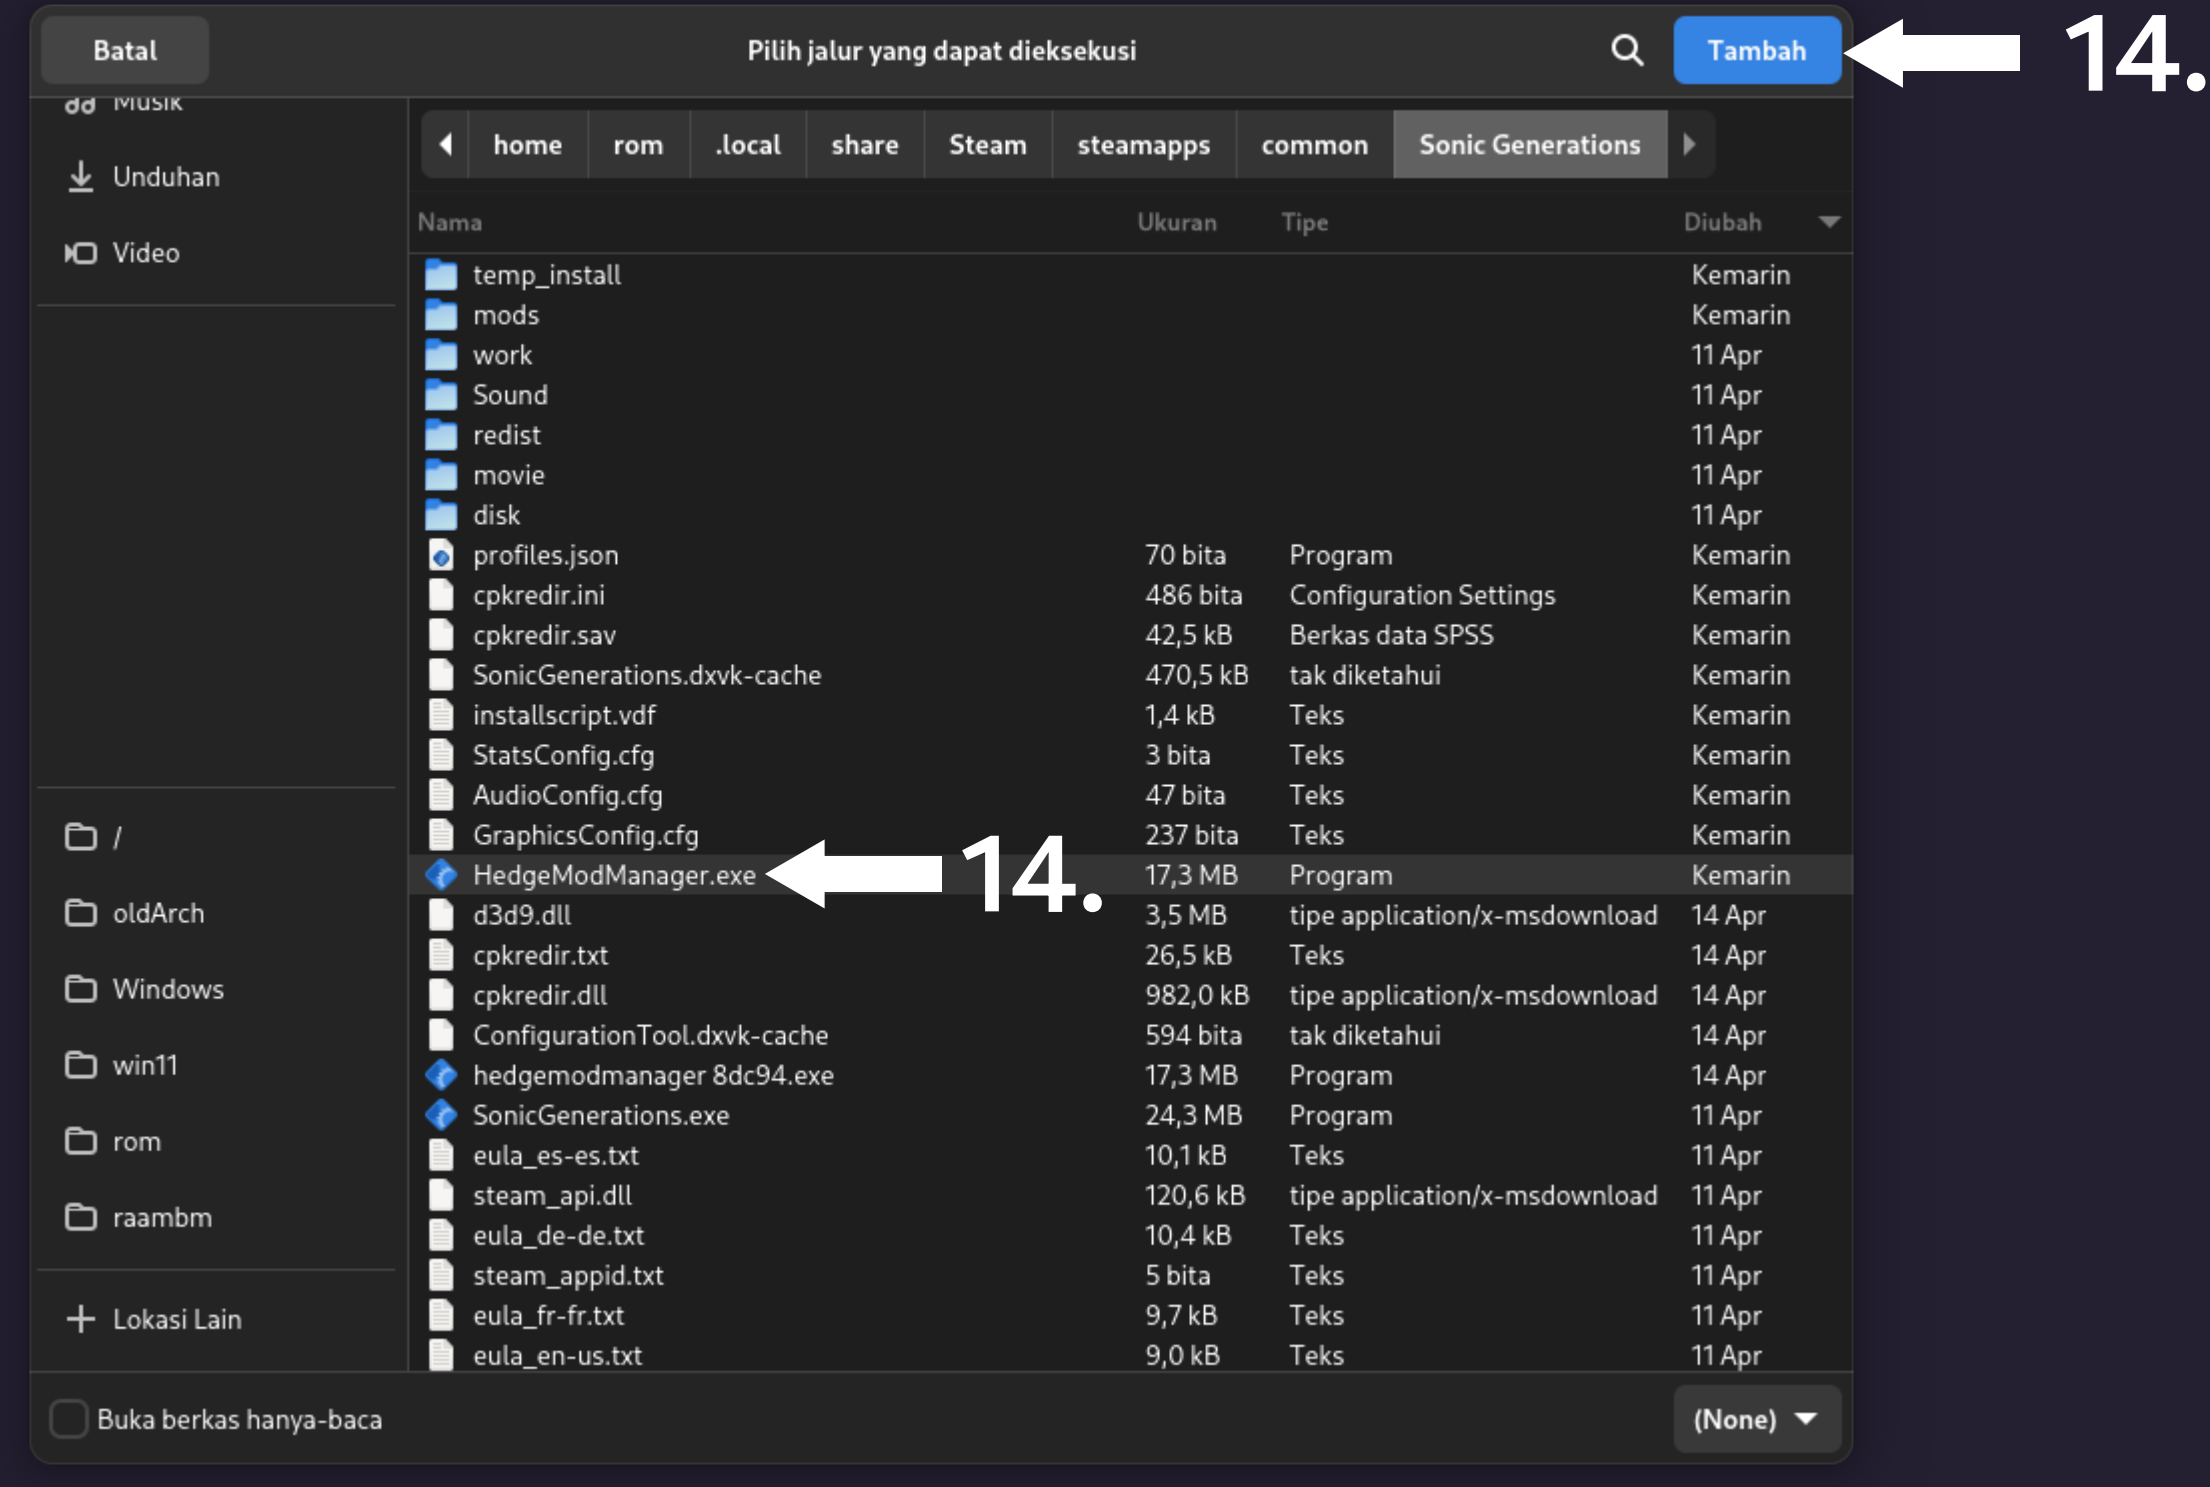

11. Click on your newly created bottle

12. Go to the "Programs" tab

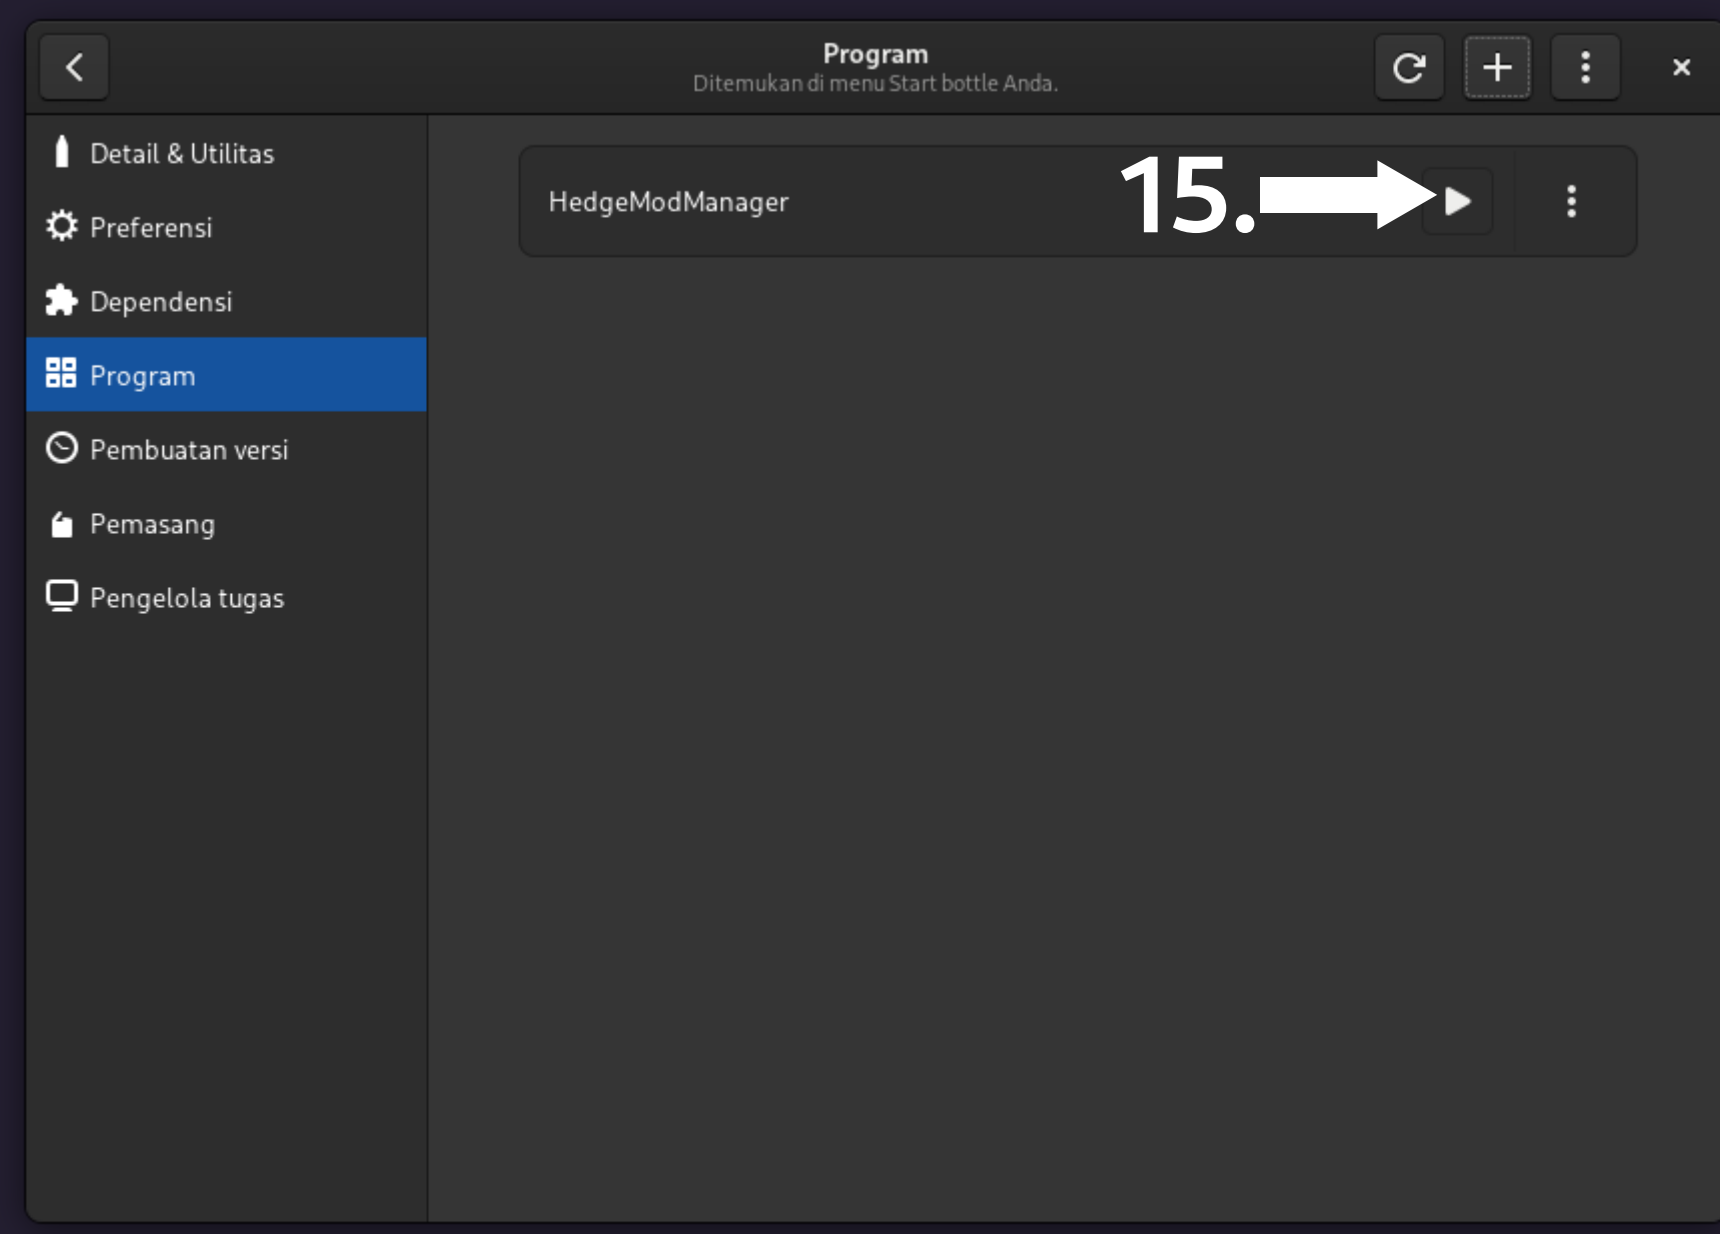

13. Click on "+" icon to manually add a program

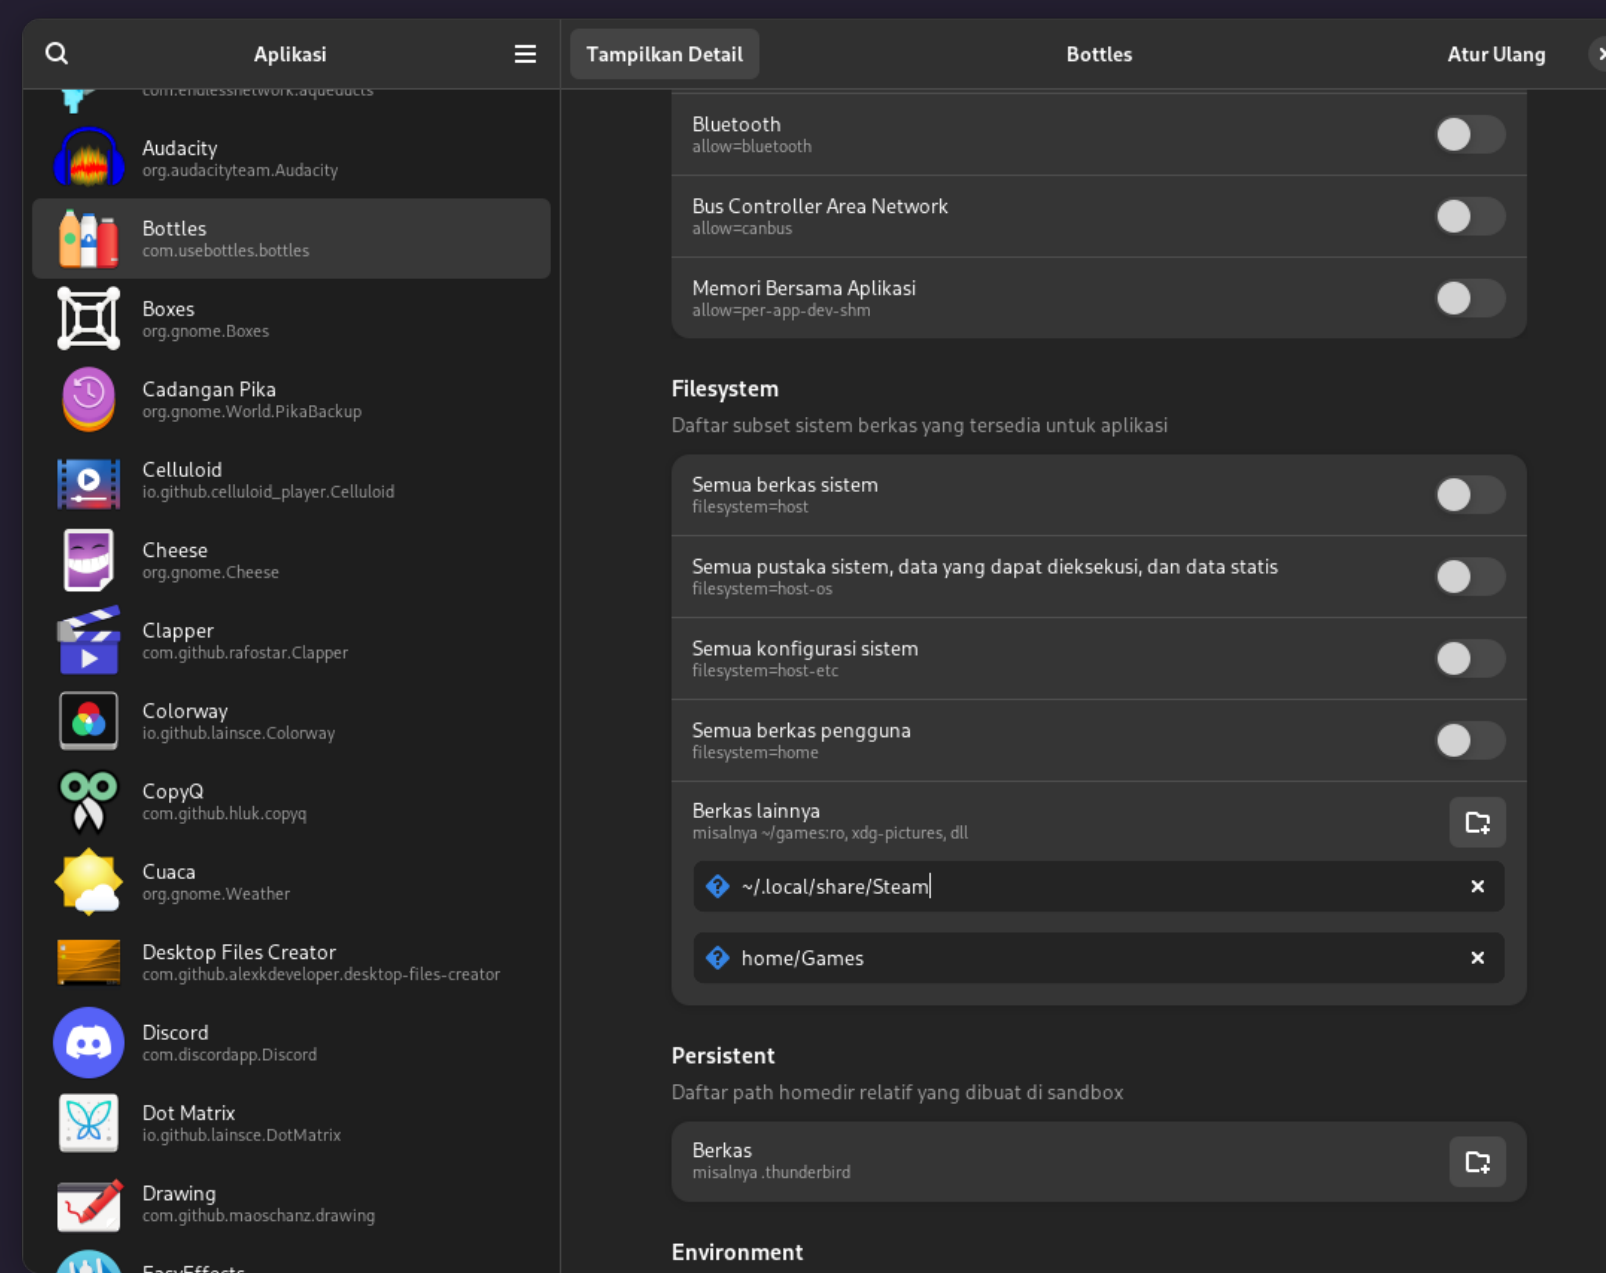

14. Choose the HedgeModManager.exe that we had moved to Sonic Generations' folder

Hedgemodbottle.yml

15. Run and happy modding!

*** Note**
You will need to allow bottles to see the entire Sonic Generations Folder, you can modify Flatpak apps permissions with flatseal

HedgeModManager.exe
